quantexa

Quantexa News API

News provides mission critical information for organizations. But the global volume every day is overwhelming, resulting in missed events, misinformed decisions, and ineffective processes. AI-powered News Intelligence aggregates the world's news content, using NLP to understand what matters to your business, and delivering it to where you need it most.

Aggregate

We source and ingest in real time 90,000+ trusted mainstream and longtail sources, from 200 countries, in multiple languages, so that no signal is left uncovered.
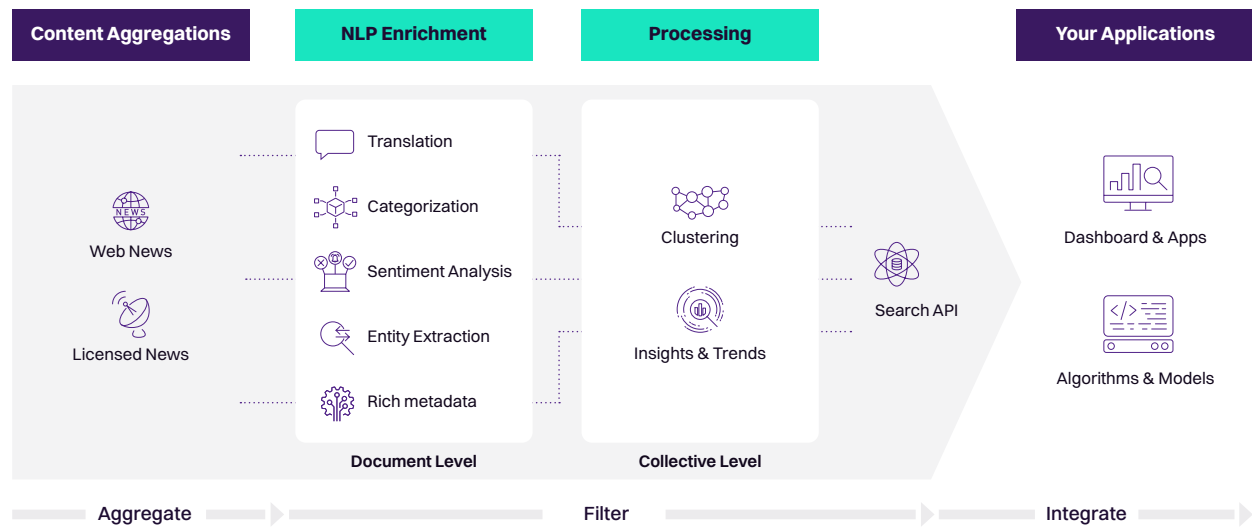

Understand

Our research-powered NLP models enrich every article with 26 datapoints, putting structure to the world's unstructured news content, making it easy to search and analyze.

Deliver

Enhance your dashboards, apps, workflows, and models with our flexible and scalable delivery methods, including advanced search in our News API.

Solutions For

Risk Intelligence

- Augment risk monitoring processes and apps with a 360° view of external threats
- Identify and investigate emerging risks with advanced search and event detection
- Transform workflows and build more accurate models with metadata and NLP enrichment

Media Intelligence

- Proactively monitor what matters by evolving beyond keyword search to entities
- Never miss a mention or event with comprehensive coverage and machine translation
- Track media reaction with entity-level sentiment analysis

What We Do For You

Automate Manual Processes

More efficient and effective workflow to free up valuable employee time

Improve Quality of Data

Enhance news discovery and analysis with accurate and flexible search

Save Time, Money, and Effort

An out-of-the-box solution with read-to-use news content pipelines and licenses

Features and Benefits

Broaden Your Trusted News Coverage

Quantexa News API curates a cost-effective news content pipeline that you can trust, providing over a million real-time articles every day so you won't risk missing any news:

- Over 90,000 trusted sources for clean and reliable content
- Articles in 15 languages are auto-translated into English in real time
- Multilingual NLP in 5 languages with coverage across 200 countries and territories

Structure the World's News Using NLP

We enrich every article with 26 data points using our proprietary natural language processing models, so the world's unstructured news articles are transformed into structured news data:

- Over 5.6 million recognized entities in our knowledge base (companies, locations, people, etc.)
- Smart Tagger taxonomies including 3,500+ topical categories and 1,500+ industries
- Positive, neutral, or negative sentiment scores at document and entity levels

Search for the News That Matters to You

Our flexible News API makes finding the news that matters to you efficient, effective and accurate:

- Search news content in real time for up-to-the minute coverage and AI-powered analysis on the news that matters to you
- Advanced entity, category, keyword, and source search filters help you separate the signal from the noise
- 8+ years of enriched historical content to inform your present and future decisions

Get Deeper Into News, When it Matters

Go beyond simply searching for news with Aylien's identification and investigation features, helping you gain a deeper understanding of events in real time:

- Detect events and topics of interest as they are developing using Aylien's event clustering capalities
- Use timeseries analyses to spot spikes in volume of articles over time
- Use trend analysis to identify entities, categories, industries, and keywords most commonly associated with your queries
